

FrontLine Maintenance Module (CMMS)

This software system provides effective management of the day to day activities of a busy maintenance or estates operation. FrontLine centres on the up-keep of Assets, Plant, Machinery and Property - bringing maintenance under control. Whether the system is used to manage your own assets or by a contractor providing a maintenance service the system can be implemented to a level that suits your business.

Great flexibility is built into the software allowing the user to implement the best fit solution for their business. FrontLine is equally at home configured to support a small operation having minimal requirements right through to a comprehensive implementation in support of the largest of maintenance and facilities operations.

With FrontLine:

- Maintain an Asset Register
- Planned Preventative Maintenance
- Plant History
- Due Diligence and Health & Safety reports
- Schedule and Manage Projects
- Condition Checks
- Inspections
- Costs, Labour and Parts
- Plant and Equipment utilisation
- Maintaining Compliance with Quality Standards
- Plant & Equipment availability
- Service Level Agreements

All this and more is within the scope of the FrontLine Maintenance module alone. Greater functionality can be found by adding additional FrontLine modules to manage parts availability, stock movements and history, procurement of parts and services, help desk and more. For those wishing to improve the accuracy of their data and reduce administration costs, Shire recommends its PDA software solutions to capture accurate data including start and finish times and even signatures.
